Analyst Note: Application Topic: Monitoring protein PEGylation and purifying PEGylated proteins from their reaction

Therapeutic proteins are often PEGylated to increase their serum lifetime; however, such reactions typically generate a heterogeneous product that can be difficult to characterize and purify. PEGylated proteins are usually purified by GFC or RPC after synthesis and the PEGylation reaction is In this example application, protein was reacted using N-terminal favoring conditions (phosphate pH 6.5 with cyanoborohydrate and 5x PEG aldehyde excess). For reaction monitoring, intact protein and reaction timepoints at 0 minutes, 30 minutes, 60 minutes and an overnight reaction
